

PRESS RELEASE

March 2017

## MULTITECH TO BE PRODUCED IN ITALY TOO FROM 2017

**Market success leads to production of the innovative rigid spacer by Alu Pro and Rolltech at the Alu Pro plant in Noale (Venice - Italy).**

Multitech is an innovative rigid spacer made of reinforced plastic with a special multi-layer barrier. Developed at the Alu Pro and Rolltech laboratories, it is sold worldwide through the Glass Alliance network, and is one of the products with the highest achievable performance in linear thermal transmittance (PSI). As a result of the particular performance features of this multi-layer barrier, which is extremely thin yet exceptionally strong, the new profile meets the most restricted current international standards, and forms an excellent barrier to water vapor and gas with all the sealants now available.

Its high thermal performance features have made it a standout product on the market immediately after its launch, calling for its production in the Alu Pro plant at Noale (Ve) as well.

High surface temperature of the glass, greatest possible reduction of any condensation on glass inside homes, lower heating costs, and lower CO2 emissions. These are only some of the many benefits of this profile along with very easy processing and extremely competitive prices.

Multitech can also be produced in a special version with wings, for use in the production of insulating glass fitted with special sun shades inside the glazing.

Available in all the main thicknesses (from 8 to 24 mm) and in a variety of colors: Black (RAL 9004), Light Gray (RAL 7035), Titanium Gray (RAL 9023) and White (RAL 9016).
