

PRESS RELEASE

September 2017

FENZI GROUP AT VITRUM 2017 FOCUSES ON THE LUXVER PRODUCT LINE AND TECGLASS TECHNOLOGY

Alongside the most state-of-the-art warm edge technologies, the **innovative Luxver line** will also be showcased at Vitrum. Our experience in the field of mirror-backing paints, the first products introduced by Fenzi more than 75 years ago and still constantly evolving, has led the company to expand the line of products it makes for mirror manufacturers around the world, developing a complete range of chemical solutions for the entire silvering process. An extremely high-quality family of products that covers the entire mirror manufacturing process, Luxver is easy and ready to use. It is engineered to meet the highest safety standards and comes in all versions, including copper-free. Luxver is already the product of choice for some of the leading industry companies for the production of superior-quality mirrors.

Also occupying center stage at Italy's appointment with the world of glass is the **Tecglass technology for digital printing on glass. Live demonstrations** during the four days of the fair offer the perfect opportunity to get an in-depth understanding of the capabilities of the machines developed by the Spanish firm that joined the Fenzi Group in 2016. These machines ensure the ideal combination of ease-of-use, high resolution, print speed and optimization of production costs. The F Type line, on display at Vitrum, lends itself perfectly to all types of applications, from architecture to interior design, and automotive to yachting. The Fast Frame printing tool, available on every model in the range, with an ideal X and Y printhead movement, can speed the production of glass frames by following their perimeters – a highly advanced technology to substantially increase the machine's versatility.

Also on display at this prominent international glass industry trade show will be the entire range of **Fenzi sealants and decorative glass paints** - including the innovative **Tempver Automotive** line - and the latest generation **warm edge spacers developed by Alu Pro and Rolltech**.

The latest in Fenzi Group technology at Vitrum 2017: Hall 5 – Stand E 04 – H 09.
